foot above the January, 2013 flood crest. Flood stage there is 15 feet, and major flooding begins at 20 feet. Numerous roads were flooded, a few of which

were impassable. There was widespread flooding of low-lying fields and woodlands.

Page 3 of 18 Printed on: 08/12/2014

Location Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

Thunderstorms intensified within a zone of strong southerly low level winds that provided abundant warmth and moisture. These strong low level winds enhanced wind shear, which promoted the development of supercells with isolated tornadoes. The storms formed near a warm front that was draped across southeast Missouri, southern Illinois, and western Kentucky. The storms occurred within a moist and moderately unstable air mass along and behind the warm front. The strong moisture feed contributed to torrential downpours that produced flash flooding in a number of counties. There was some major flash flooding in a corridor from Union County to Saline and Gallatin Counties during the evening.

# WHITE COUNTY --- CARMI [38.08, -88.17], 1.0 SSE CARMI MUNI ARPT [38.09, -88.14], 2.2 WSW EPWORTH [38.06, -88.14], 3.1 SSW CARMI [38.04, -88.19], 1.9 SW CARMI [38.06, -88.20]

Moderate flooding occurred along the Little Wabash River. At the Carmi river gage, the river crested at 33.19 feet on the 11th. This crest was about one-half foot above the flood crest in March of 2011. Flood stage is 27 feet, and moderate flooding begins at 32 feet. Some county roads were inundated. Floodwaters backed up McHenry slough. Areas near Routes 1 and 14 in Carmi began to flood. There was considerable flooding of low-lying fields and woodlands near the river.

# WABASH COUNTY --- KEENSBURG [38.35, -87.87], 2.9 SSW COWLING [38.28, -87.95], 3.4 ESE COWLING [38.30, -87.87], 1.8 SSE MT CARMEL [38.40, -87.76], 1.6 S MT CARMEL [38.40, -87.77]

04/04/14 19:00 CST 20K Flood (due to Heavy Rain)
04/19/14 09:00 CST 20K Source: River/Stream Gage

Moderate flooding occurred along the Wabash River. At the Mount Carmel river gage, the river crested at 27.14 feet on the 11th. Flood stage is 19 feet, and moderate flooding begins at 25 feet. Extensive agricultural flooding occurred in areas that are not protected by levees. Three Illinois township roads south of Illinois 1 between Keensburg and Grayville were flooded for a total of 10 miles, blocking access to oil fields. The flooding necessitated relocations of cattle and some farm equipment to higher ground. Numerous local river roads were flooded. Some mobile homes were moved to higher ground. Installation of flood gate A was required at Mount Carmel. Access to local camp sites was blocked by the gate, but there was minimal impact to commercial activities because of the gate closure.

# FRANKLIN COUNTY --- 1.4 S ZEIGLER JCT [37.90, -89.02], 1.8 SSW ZEIGLER [37.87, -89.06], 2.2 S ZEIGLER [37.87, -89.05], 1.6 WSW PLUMFIELD [37.87, -89.03], 1.4 NW PLUMFIELD [37.90, -89.01]

04/04/14 22:15 CST 0 Flood (due to Heavy Rain) 04/10/14 12:00 CST 0 Source: River/Stream Gage

Minor flooding occurred along the Big Muddy River. Low-lying woods and fields near the river were inundated.

# GALLATIN COUNTY --- SHAWNEETOWN [37.70, -88.13], 3.8 NE SHAWNEETOWN [37.73, -88.07], 4.3 NE SHAWNEETOWN [37.74, -88.07], 0.4 NNE SHAWNEETOWN [37.71, -88.13]

60K

High pressure extending from the middle Missouri Valley to the southern Plains brought unseasonably cold air and a rare mid-April freeze. Except for those counties bordering Indiana or Kentucky, low temperatures were in the lower 30's. Lows were 30 degrees at Mount Vernon, 31 degrees at Carbondale, and 32 degrees at Fairfield, Marion, and Harrisburg.

04/16/14 01:00 CST

04/16/14 07:00 CST

High pressure moved east across the Ohio Valley, bringing unseasonably cold air and widespread freezing temperatures. Lows were from 28 to 32 degrees at many locations in southern Illinois. The coldest observed temperature was 28 degrees at the Mount Vernon airport. Other lows included 31 degrees at the Carbondale airport and at Metropolis.

JACKSON COUNTY --- 1.5 SSW MT CARBON [37.73, -89.34], 1.4 ESE MT CARBON [37.74, -89.31]

04/24/14 21:45 CST 35K

04/24/14 21:49 CST Source: NWS Storm Survey

The tornado damage was mostly along Highway 127, where a large portion of a farm shed roof was blown off. The metal roofing and attached wooden roof framing was lofted into trees up to several hundred feet away. A large utility pole was broken along Highway 127. At this location and elsewhere along the path, several trees or tree limbs were broken, along with other minor damage. The tornado lifted just northeast of Old Highway 13. Peak winds were estimated near 90 mph.

An isolated tornado formed in association with a severe thunderstorm that was along a line of weaker showers and storms over southwest Illinois. A compact, fairly potent 500 mb shortwave trough moved east-northeast across Missouri and northern Arkansas as it assumed a slight negative tilt. This trough provided plenty of upper-level support for the convective activity. A surface low pressure center consolidated and deepened as it tracked from central Missouri into central Illinois. The trailing cold front served to focus thunderstorm development in the moistening low-level environment over southern Illinois.

Several trees from 8 to 12 inches in diameter were blown down.

A few severe thunderstorms occurred during the afternoon and evening hours. A powerful mid-level shortwave trough and its associated 70-80 knot jet streak translated from the southern high Plains into the upper Midwest. On the heels of this initial shortwave trough, a channeled vorticity maximum and attendant 70-knot jet streak progressed across the southern Plains into southwest Missouri. In association with these features, a 40 to 50 knot southerly low-level jet became established over the Mississippi Valley. Isolated severe thunderstorms occurred during the early afternoon hours near a surface warm front lifting north across southern Illinois. During the evening, isolated severe storms occurred ahead of a cold front surging eastward across the Ozark Mountains.

WARRICK COUNTY NEWBURGH [37.95, -87.42]			
04/03/14 00:00 CST	0	Heavy Rain	
04/03/14 22:59 CST	0	Source: Trained Spotter	

A trained spotter reported a 24-hour rainfall of 4.17 inches. Standing water was over several town streets. The streets were still passable. Drainage ditches were over their banks in numerous locations.

# VANDERBURGH COUNTY --- 0.8 WNW STRINGTOWN [38.03, -87.58], 0.7 E ERSKIN [38.05, -87.52], 3.9 SE EVANSVILLE [37.94, -87.50], 1.1 SSE HOWELL [37.95, -87.62]

04/03/14 16:14 CST	0.35M	Flash Flood (due to Heavy Rain)
04/04/14 05:00 CST	0	Source: Trained Spotter

Widespread flash flooding of streets and highways occurred in Evansville. A couple of major highways were impassable. The Lloyd Expressway was impassable at Highway 41. Vehicles were abandoned. At the Perry Township fire station, floodwaters in the station were up to the bumpers of the trucks, about 3 to 4 feet deep. The parking area was washed away, exposing a natural gas line approximately three feet deep. A number of Evansville houses had major damage, such as basement walls collapsed. Small streams were well out of their banks. Water was shooting out of sewers. Water was flowing over numerous roads in Evansville. A storm total rainfall of 5.01 inches was reported along the Lloyd Expressway. An unofficial report of 6.00 inches was received on the southeast side of town.

Moderate flooding occurred along the White River. At the Hazleton river gage, the river crested at 25.80 feet on the 11th. This was only a couple of inches lower than the crest of 26.0 feet in January of 2007. Flood stage at Hazleton is 16 feet, and moderate flooding begins at 24 feet. Flood gates are normally installed at Hazleton at 26 feet. People in residential cabins on the riverward side of the levee generally relocate at this level. Many local roads were completely impassable. Oil fields were inaccessible. Water began to come onto the street at the corner of West 2nd Street and Brown Street in the town of Hazleton. Extensive flooding of agricultural fields occurred. Since this flood occurred primarily outside of the growing season, little if any crop damage occurred.

Moderate flooding occurred along the Wabash River. At the Mount Carmel river gage, the river crested at 27.14 feet on the 11th. Flood stage is 19 feet, and moderate flooding begins at 25 feet. Extensive agricultural flooding occurred in areas that are not protected by levees. Access to oil fields was blocked by high water. The flooding necessitated relocations of cattle and some farm equipment to higher ground. There was extensive lowland flooding in western Gibson County. Numerous local river roads were flooded. Some mobile homes were moved to higher ground. Flood waters affected residents of East Mt. Carmel Indiana

Major flooding occurred along the Patoka River. Many roads were closed in the vicinity of the river, including State Route 64 between Oakland City and the Arthur area. At the river gage along the Patoka River just east of Patoka, the river crested at 22.34 feet on the 10th. This crest was just a few inches lower than the crest of 22.60 feet in January, 2005. Flood stage at Patoka is 18 feet, and major flooding begins at 22 feet.

Heavy rainfall during the first week of April caused most of the region's rivers to rise. Many rivers experienced minor to moderate flooding.

Creeks remained well out of their banks, and some back roads were still underwater. U.S. Highway 51 was underwater but passable over the Bayou Du Chien Creek. State highway crews flagged traffic across the bridge. The flooding was due to thunderstorms the previous night combined with light to moderate rain the next day.

A few severe thunderstorms occurred during the afternoon and evening hours. A powerful mid-level shortwave trough and its associated 70-80 knot jet streak translated from the southern high Plains into the upper Midwest. On the heels of this initial shortwave trough, a channeled vorticity maximum and attendant 70-knot jet streak progressed across the southern Plains into southwest Missouri. In association with these features, a 40 to 50 knot southerly low-level jet became established over the Mississippi Valley. Isolated severe thunderstorms occurred during the afternoon hours near a surface warm front lifting north across the Lower Ohio Valley. During the evening, widespread storms including isolated severe storms occurred ahead of a cold front surging eastward across the Ozark Mountains. The strong supply of warm and moist air fueled heavy rainfall and some local flash flooding southwest of a Paducah to Murray line overnight.

Date/Time

#### FULTON COUNTY --- 0.2 NNE JORDAN [36.50, -89.03], 2.4 SE CAYCE [36.53, -89.00]

Event Type and Details

This tornado continued northeast across the Tennessee state line from Obion County into Fulton County, Kentucky. By the time the tornado reached Kentucky, it was significantly less destructive. The tornado was witnessed by a number of people, including trained spotters. One church received light to moderate damage. A small portion of the church's metal roof was blown off, and the steeple came down. A nearby small, wooden barn was heavily damaged. There was nearby tree damage. Otherwise, all the known damage occurred in the Tennessee portion of the track. The damage occurred in the vicinity of the intersection of Highways 781 and 166 west of Fulton. Peak winds in the Fulton County portion of the track were near 90 mph.

#### HICKMAN COUNTY --- 0.4 NE FULHAM [36.65, -88.87], 1.4 NE FULHAM [36.67, -88.85]

04/28/14 16:46 CST 2K Tornado (EF0, L: 1.03 mi , W: 25 yd) 04/28/14 16:47 CST 0 Source: NWS Storm Survey

Large tree limbs were blown down by this brief tornado. The tornado crossed Highway 58 on the east side of Fulgham and dissipated about a minute later. Peak winds were estimated near 85 mph. This tornado was produced by the same mini-supercell that spawned the EF-2 tornado near Union City, Tennessee and Fulton, Kentucky.

#### GRAVES COUNTY --- 3.0 SW WINGO [36.62, -88.77]

Location

04/28/14 16:48 CST 0 Funnel Cloud

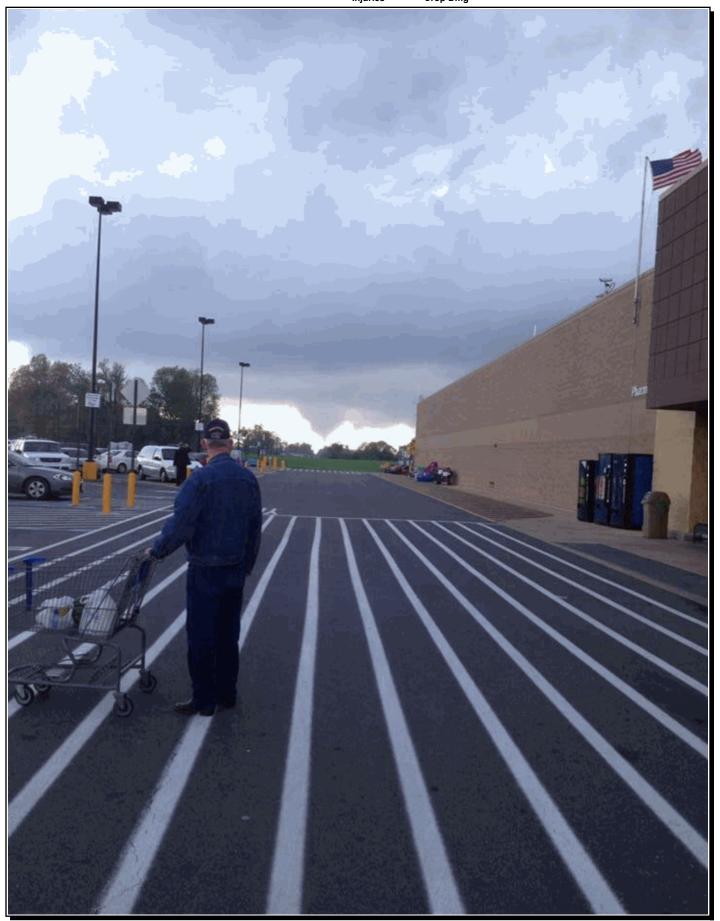

04/28/14 16:48 CST 0 Source: Trained Spotter

Trained spotters reported a funnel cloud between Water Valley and Wingo.

A couple of isolated tornadoes occurred with a mini-supercell thunderstorm as it tracked across southwest Kentucky. A mid-level disturbance supported the development of storms in a region where sunshine heated and destabilized the atmosphere ahead of a cold front. The cold front was approaching the Mississippi River as the storms developed. The storms intensified as a low-level jet supported an influx of warmer and moister air. Despite marginal instability, the presence of 60 to 80 knots of deep-layer bulk wind shear supported isolated supercells.

A home in Bernie was flooded with 3 to 6 inches of water. Some roads remained underwater countywide. Creeks stayed out of their banks following thunderstorms the previous night and rain the following day.

Widespread thunderstorms, including a few severe thunderstorms, occurred during the evening hours. A powerful mid-level shortwave trough and its associated 70-80 knot jet streak translated from the southern high Plains into the upper Midwest. On the heels of this initial shortwave trough, a channeled vorticity maximum and attendant 70-knot jet streak progressed across the southern Plains into southwest Missouri. In association with these features, a 40 to 50 knot southerly low-level jet became established over the Mississippi Valley. During the evening, isolated severe storms occurred ahead of a cold front surging eastward across the Ozark Mountains. The strong supply of warm and moist air fueled heavy rainfall and some local flash flooding. Significant flood damage to roads was reported in Butter County.
